

## **Sirena Jacobsen**

### **Director of Women in Mining Northwestern Ontario**

Sirena Jacobsen is an exploration geologist with six years of experience in the field. She grew up in Thunder Bay and Sioux Lookout, Ontario and developed a deep appreciation for the outdoors early on. She has pursued her passion for earth sciences at Lakehead University, where she earned her degree in 2019.

Currently, Sirena works with Agnico Eagle on a rotational schedule, traveling between Thunder Bay and Atikokan, Ontario. Her role allows her to contribute to exciting exploration projects while continuing to grow as a geoscientist in an evolving industry.

During her time with Agnico Eagle, she has had the opportunity to contribute to both geological exploration and community engagement. She organized and led a variety of community initiatives, including garage sales, garbage clean-up events, team sports, and educational presentations at local elementary schools. These experiences have strengthened her communication and leadership skills while deepening her connection to the communities that we work in. At the core of her role, she remains deeply passionate about rocks and the science behind them. Prior to joining Agnico Eagle, she gained valuable experience working with several junior exploration companies and a consulting firm based in Thunder Bay, which helped build a strong foundation in fieldwork and project support.

Outside of work, Sirena loves spending time outdoors with her dog—whether it's hiking, camping, swimming, hunting, or fishing. She is also creative at heart and enjoys exploring new crafts in her spare time. Staying active is important to her, and she regularly plays sports like volleyball and basketball. Most of all, she values quality time with friends and family, which keeps her grounded and energized.
